Due to the presence of blackbody radiation, any object radiates electromagnetic waves depending on the temperature. The part with a wavelength of 2.0 to 1000 microns is called thermal infrared. Thermal infrared imaging can reflect the temperature field of the surface of the object by imaging the object with a thermal infrared sensitive CCD.

Thermal infrared has a wide range of applications in military, industrial, automotive assisted driving, and medical fields. Thermography Software offers an expanded set of sophisticated controls for generating more comprehensive thermal imaging inspections and research reports. Record and play back radiation video files and time/temperature maps, etc.

The Thermography Software market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
