Abstracts

Thorium are naturally occurring radioactive materials that are present in small amounts in rocks and soil. Helium can be introduced as a nuclear fuel into seven types of reactors. Helium-fueled reactors are safer because the reaction is easy to stop because the operation does not have to be carried out under extreme pressure. Compared to uranium reactors, helium reactors produce much less waste, produce much less radioactivity and have a much shorter life.

The Thorium Reactor market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
