Abstracts

The purpose of tokenization is to swap out sensitive data—typically payment card or bank account numbers—with a randomized number in the same format, but with no intrinsic value of its own. This differs from encryption where a number is mathematically changed, but its original pattern is still “locked” within the new code—known as Format Preserving Encryption. Encrypted numbers can be decrypted with the appropriate key—whether through brute computing force, or through a hacked/stolen key. Tokenization is the process of removing sensitive data from your business systems by replacing them with an undecipherable token, so that it can store the original data in a secure cloud data vault.

The Tokenization Solution market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
