A bogie is a chassis carrier or frame wheel that is attached to a vehicle - a modular subassembly of wheels and axles. Bogies come in a variety of forms in a variety of modes of transport. The bogie can maintain a normal connection (such as many railcars and semi-trailers) or can be quickly disassembled (such as a trolley in a road or rail bogie exchange); it may contain a suspension (such as most rail and truck bogies) That way, either solid and conversely suspended (because the bogies of most tracked vehicles are); it can be mounted on rotating parts, such as traditionally installed on railcars or locomotives, with additional connections and springs (eg On the landing gear of the passenger aircraft), or by other means (unintentional bogie) fixed in place.

The Train Bogies market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
