Abstracts

Typical UV curable resins consist of oligomers, monomers (which act as diluents), photopolymerization initiator, coinitiators (spectral sensitizer, reducing agents etc.) and various additives such as stabilizers, antioxidants, plasticizers, and pigments. The majority of commercial light cure resins are based on free radical curing acrylic compounds (acrylates). Free radical curing compositions are the most versatile curing systems in regard to product properties and monomers / oligomers available on the market. However, free radical acrylic systems are subject to oxygen inhibition, meaning oxygen in the air can stop the molecules at the surface from polymerizing, leaving a tacky surface layer.

The UV Curable Resins market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
