Abstracts

A variable displacement piston pump is a type of mechanical-electrical motor placed in a fluid channel. It is constructed to generate electrical energy either from the flow of natural fluid flowing through it, or by applying mechanical forces to flow a stationary fluid in the conduit, thereby providing a dual-displacement pump with dual-purpose adjustability. Such pumps have a variety of applications because they can be configured to capture the maximum amount of hydraulic fluid energy as the fluid flow velocity in the passage changes dynamically, or they can be switched to apply mechanical energy driven by the electrical power to increase fluid flow.

The Variable Displacement Piston Pump market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
