Volatile corrosion inhibitors (VCI) are a type of corrosion inhibitor that are used to protect ferrous materials and nonferrous metals against corrosion or oxidation where it is impractical to apply surface treatments. They slowly release compounds within a sealed airspace that actively prevents surface corrosion. A typical application is to protect stored tools or parts inside bags, boxes or cupboards, one advantage of VCIs being that if the container is opened and reclosed, levels of inhibitor will recover. The Vci Anti Rust Paper market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
