Abstracts

The purpose of vertical tillage is to improve soil health, increase water penetration, and reduce soil erosion and compaction density. In varying degrees of soil movement, its purpose is not to invert the soil and leave a residue on the surface of the soil. It usually consists of a small forward disc that limits soil inversion and slicing residues to speed up the decomposition and feed the planter or seeder into the heavy residue field. Many times it also includes a deep ripping tool that breaks hard drives and compaction from traditional farming tools and heavy equipment such as large tractors and combine harvesters.

The Vertical Tillage Machines market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
