## **Abstracts**

Viscosity is considered to be a key factor for the measuring of quality of a lubricant. Viscosity is the quantity for expressing the magnitude of the internal friction of the fluid whereas, viscosity index determines the extent of viscosity of the hydraulic fluid which can change with the temperature as the viscosity index improves there may small change in fluid viscosity for the given temperature. Viscosity Index Improvers enhance lubrication under high stress which are an integral part of fuel additives for smooth functioning of automotive as well as non-automotive engines.
