Abstracts

The Wankel engine is a type of internal combustion engine that uses an eccentric rotary design to convert pressure into rotational motion. All components rotate in unison in one direction, rather than a conventional reciprocating piston engine with a piston that changes direction violently. Compared to the more common reciprocating piston designs, the Wankel engine has the advantages of simplicity, smoothness, compactness, high speed per minute and high power-to-weight ratio. This is mainly because each rotor rotates to produce three power pulses, while the two-stroke piston engine produces one power per revolution, and the four-stroke piston engine produces one power pulse per revolution.

The Wankel Engines market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
