Abstracts

Waterproof breathable textiles (WBT), as the name depicts, are employed in the manufacture of garments that are weather-proof, i.e., which prevent the passage of water and heat from the fabric. These textiles prevent both penetration and absorption of water, unlike water-repellent fabrics that only delay water penetration. These waterproof breathable textiles permit the flow of water vapor (perspiration) from inside the clothing to the outer atmosphere. However, these textiles prevent penetration of heat or water from outside to inside the fabric. The waterproof breathable textiles market can be bifurcated on the basis of product type into densely woven, coated, and membranes. On the basis of end-user industry, the market for waterproof breathable textiles can be segmented into garments, footwear, and gloves.

The Waterproof Breathable Textiles (Wbt) market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
