Exoskeletons, as the name indicates, are skeletons on the outside of bodies. In health technology, exoskeletons can provide patients with the strength and balance needed to stand and even walk. The wearable robots help patients regain and strengthen movement. The robot replaces or improves a damaged body function or trains people to move by themselves again. The robots can also lighten therapeutic loads. For example, they can help people stand up and walk after strokes or paraplegia. Wearable robots can also assist people who structurally overburden their bodies. In addition to healthcare, a wearable robot can be used in numerous applications, from communications to safety.

The Wearable Robotic Exoskeleton market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
