WiFi Access Point is a networking device that allows easy access to the Internet over the air. Most access points look very similar to routers. An access point receives data by wired Ethernet, and converts to a 2.4Gig or 5Gig Hz wireless signal. It sends and receives wireless traffic to and from nearby wireless clients. An access point is different from a wireless router, in that it does not have firewall functions, and will not protect your local network against threats from the Internet.
