Abstracts

Wound Closure Products such as surgical tape, Surgical tape used to close a small wound is referred to as a wound closure strip. Apply these strips to the wound or laceration so that it pulls the surrounding skin on either side of the wound together. Since the earliest use of suture materials, wound closure techniques have rapidly developed, leading to the development of absorbable sutures, staples, bands, synthetic sutures, and adhesive compounds to include lesions or surgical incisions. The aesthetic closure of a wound or surgically induced wound is based on the healing mechanism and skin anatomy as well as the choice of suture material and closure technique. Surgical wound closure assists the biological healing process by joining the wound edges. Choosing the right materials and closure techniques to ensure optimal healing is critical.
