Abstracts

Hydrogels can be defined as water-swollen networks of polymers. Most are liquids at 4 degrees or room temperature but will form a gel when incubated at 37°C. Because of their properties, cells can be embedded inside hydrogels by mixing cell solution with hydrogel before gel formation: the mix is then dispensed in a cell culture vessel and during the gelation process cells will be encapsulated inside the gel. Compared to classical, 2D cell culture, cells cultured in 3D, embedded in gels, recover different characteristics they have when placed in their natural environment.

The 3D Hydrogels For Cell Culture market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
