Abstracts

3D mapping and 3D modeling is the process of creating and viewing objects using 3D techniques. While mapping is used to create 3D views of objects, modeling helps create a 3D model of the desired object with the help of specialized software. 3D modeling methods include polygonal modeling, splines, patches, primitive modeling and Non-uniform rational basis spline (NURBS) modeling.

Based on the 3D Mapping and 3D Modelling market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
