Abstracts

3D Meshes, often referred to as spacer fabric, can offer a perfect combination of cushioning and good ventilation. For 3D-meshes, two nets or even a net and a fabric are kept at a distance by a knit of strong threads. This gives the 3D-mesh its open structure through which air can circulate very well.

Various materials and constructions can influence the properties of 3D-meshes: they are available in different thicknesses, with different pressure sensitivities, elastic or inelastic, with different top fabrics and in different colors.

Based on the 3D Mesh market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
