Abstracts

3D printing is an innovative way of structuring an object or creating layer by layer. A design of the product is developed into the computer and the same system is integrated with the machine. Small granules of the raw materials are fed into the machines that are further released by the robot arm to form the 3D shape. The similar technology is applied for creating food products. 3D technology printers not only help in the formation of the 3D shape but also deliver the food with eye pleasing taste and most importantly the taste.
