Abstracts

3D scanning is a process that captures the three-dimensional attributes of an object along with information such as color and texture. This technology helps save time, cost, and efforts during a manufacturing process and thus, improves the quality of the output. 3D scanners substantially capture the dimensions of physical objects using laser, light, or x-rays and create point clouds, which are then used to produce a 3D representation of the scanned object using software. Nowadays, 3D scanners have emerged as powerful tools aerospace & defense, automotive, entertainment & media, construction, healthcare, and several other sectors.

Based on the 3D Scanning market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
