Abstracts

5-Aminolevulinic acid is an intermediate in tetrapyrrole biosynthesis pathway. 5-Aminolevulinic acid is produced by the enzyme ALA synthase from glycine and succinyl CoA. Uroporphyrinogen-III, the final product in this pathway, is a major branch point that leads to biosynthesis of different tetrapyrrole compounds (e.g. porphyrins). Tetrapyrroles usually function as a metal-binding cofactor in many important enzymes, proteins and pigments, such as heme, chlorophyll, cobalamine, siroheme, and cofator F430.

Based on the 5-Aminolevulinic Acid market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
