Abstracts

An access point based controller has hardware in the APs that is capable of serving as a controller for a set number of APs. Once an AP has been chosen as the controller, the APs will report to it, and the network is managed by controller in the AP. The upsides to this approach are that no additional controller hardware is needed.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Access Point and Wi-Fi Controller market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation.
