Abstracts

Acetone Cyanohydrin is manufactured by the reaction of acetone and hydrogen cyanide in presence of water solutions such as KOH and NaOH. The intermediate product however, is unstable in alkaline solution and hence is treated with sulphuric acid until its pH reaches 1-2. Acetone cyanohydrin is used as an intermediate product for manufacturing methylacrylates, methacrylamide, methacrylic acid and methacrylonitrile among others. Acetone cyanohydrin is majorly consumed in the manufacture of methylmethacrylates (MMA). Methylmethacrylates are used in the production of polymethyl methacrylate. In addition, acetone cyanohydrin finds applications in manufacturing of insecticides, flavoring agents and pharmaceuticals among others. Based on the Acetone Cyanohydrin market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
