Abstracts

Acetylene is a highly flammable gas obtained from calcium carbide. Acetylene is manufactured by partial combustion of methane. Acetylene gas is also obtained as byproduct of reaction between calcium carbide and water. Acetylene gas is also produced from hydrocarbon sources such as naphtha, crude oil and coal among others. It is also obtained as a side product in the ethylene stream from cracking of hydrocarbons. Acetylene is colorless and extremely explosive. Acetylene is mainly consumed as a fuel and chemical building block. It is also used in welding and metal cutting and many other brazing applications.

Based on the Acetylene Gas market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
