Abstracts

Acoustic microscope is a kind of microscope. It uses very high or ultra-high frequency ultrasound to scan samples, and then converts them into electrical signals, thus reconstructing images on the video screen. Acoustic microscope is developed as a tool to study the internal microstructure of opaque solid or biological materials. It can operate in a nondestructive manner and penetrate most solid materials. This technology can detect physical defects such as cracks, voids and delamination with high sensitivity and effectiveness by monitoring the internal characteristics of samples through three-dimensional integration.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Acoustic Microscope market covering all its essential aspects.
