Abstracts

Acrylic rubber is a type of rubber that shows excellent resistance to hot oil and oxidation. The chemical name of acrylic rubber is alkyl acrylate copolymer (ACM) and the trade name is HyTemp. It is classified under specialty rubbers. It has a continuous working temperature limit of 150°C and a sporadic limit of 180°C. ACM has electrical and magnetic polarity and is free from any kind of unsaturation. Other advantages are resistance to ozone and low permeability to gasses. It is majorly used in automotive transmissions and hoses along with shaft seals, adhesives, beltings, gaskets, and O-rings. Owing to its damping properties, it is used in vibration damping mounts. Based on the Acrylic Rubber market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
