Abstracts

Electroencephalography is an electrophysiological monitoring method that records electrical activity in the brain. It is usually non-invasive and the electrodes are placed along the scalp, although invasive electrodes are sometimes used, such as in an electroencephalogram. The EEG measures the brain from the inner neuron of the generated ion current of the ion current. In the clinical context, EEG refers to the recording of the brain's self-generating activity over a period of time, from multiple electrode records placed on the scalp.
