Abstracts

When high-definition televisions reached the marketplace, they were considered a luxury. But as costs came down and consumer adoption rose, they became the norm. Now, if you stream a standard-definition video online, you're likely to rub your eyes and wonder if it's just a blurry image. Viewers want clearer pictures. And for the insurance industry, high-resolution aerial images from airplanes and drones are opening a new range of possibilities not attainable with lower-res satellite imagery and ground surveys.

For properties of higher value, a surveyor or loss control professional might be sent to the property to conduct a survey. For properties of lower value, some insurers have more recently begun to rely on public records data, trusting that municipal tax assessors have accurately captured basic attributes of the structure.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Aerial Imaging in Insurance Service market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation. Further, mergers & acquisitions, emerging market trends, the impact of COVID-19, and regional conflicts will all be considered.
