Abstracts

Agile software development, also known as agile development, is a new approach to software development that has attracted widespread attention since the 1990s. It is a software development feature that meets the needs of fast-changing needs. Their specific names, concepts, processes and terminology are different. Compared with 'non-agile', they emphasize the close cooperation between programmers and business experts, face-to-face communication (think more effective than written documents), and often provide new software versions, compact and self-organizing teams, code writing and Team organization methods that adapt well to changing needs and focus on people's role in the software development process

Based on the Agile Development Software market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
