Abstracts

Agricultural emulsifiers is a formulation is a mixture of the active ingredient with other inert (inactive) substances. Different formulations may be used differently. Some are to be used direct from the package, while others need to be diluted with water, oil, or other carriers. The most frequently dry and water miscible formulations include:

EC?SP?WP?SL

In agriculture, surfactants (short for “surface-acting agents”) help farmers use herbicides (aka “weed killers”) more efficiently. Surfactants help by reducing the surface tension of water, and since herbicide sprays are mostly water, this keeps the spray on the targeted weed rather than rolling off onto the soil.

An adjuvant is any substance in a herbicide formulation or added to the spray tank to improve herbicidal activity or application characteristics.

Spray adjuvants are generally grouped into two broad categories--activator adjuvants and special purpose adjuvants.
