Abstracts

Agricultural emulsifiers is a formulation is a mixture of the active ingredient with other inert (inactive) substances. Different formulations may be used differently. Some are to be used direct from the package, while others need to be diluted with water, oil, or other carriers. The most frequently dry and water miscible formulations include:

EC?SP?WP?SL

In agriculture, surfactants (short for “surface-acting agents”) help farmers use herbicides (aka “weed killers”) more efficiently. Surfactants help by reducing the surface tension of water, and since herbicide sprays are mostly water, this keeps the spray on the targeted weed rather than rolling off onto the soil.

An adjuvant is any substance in a herbicide formulation or added to the spray tank to improve herbicidal activity or application characteristics.

Spray adjuvants are generally grouped into two broad categories--activator adjuvants and special purpose adjuvants.

Based on the Agrochemicals Surfactants, Emulsifiers, Adjuvants market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
