Abstracts

Air-to-ground communication is the means by which people on the ground and those in airborne vehicles communicate with each other. Since the Wright brothers' first flight in 1903 in Kitty Hawk North Carolina, there has always been a question of how to communicate with pilots in the air. Originally it was seen as a very difficult task: ground controls used visual aides to provide signals to pilots in the air. Next came the advent of portable radios small enough to be placed in planes, which for the first time offered pilots the ability to communicate back to the ground. Today air-to-ground communication relies heavily on the use of many systems. Planes are outfitted with the newest radio and GPS systems as well as internet and video capabilities.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Air to Ground Communication market covering all its essential aspects.
