Abstracts

Air-to-ground communication is the means by which people on the ground and those in airborne vehicles communicate with each other. Since the Wright brothers' first flight in 1903 in Kitty Hawk North Carolina, there has always been a question of how to communicate with pilots in the air. Originally it was seen as a very difficult task: ground controls used visual aides to provide signals to pilots in the air. Next came the advent of portable radios small enough to be placed in planes, which for the first time offered pilots the ability to communicate back to the ground. Today air-to-ground communication relies heavily on the use of many systems. Planes are outfitted with the newest radio and GPS systems as well as internet and video capabilities.

Based on the Air to Ground Communication market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
