Abstracts

There are two types of ground refueling for aircraft: gravity refueling and pressure refueling. Pressure refueling refers to the fuel filling method in which fuel is injected into the aircraft fuel tank or external fuel tank through the fuel pipeline and control accessories in a closed manner and at a specified pressure through the pressure fueling nozzles. Gravity refueling refers to the fuel refueling method in which fuel flows into the aircraft from the fuel port on the upper part of the fuel tank by its own weight. Due to the low efficiency of the gravity refueling system and the need for more manpower, it only exists as a backup system for the pressure refueling system. Pressure refueling is the main method in modern aircraft design.

The aircraft ground refueling equipment involved in this report includes pressure fueling nozzles, hose end control valve, hydrant coupler, pressure control valve & coupler, hydrant valve and other (Shut-off valve, Bottom loading coupler, Strainer Ball Valve, etc.). The main application areas are aircraft tank refueller, aircraft hydrant dispenser.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Aircraft Ground Refueling Equipment market covering all its essential aspects.
