Abstracts

Aluminum is recognized as one of the most energy efficient and sustainable construction materials. Aluminum is especially receptive to today's high-performance, architectural coatings. As a result, the wide variety of factory-applied coatings and colors perform well and stay colorfast. This is a crucial consideration in steep slope roof applications that make the roof a highly visible architectural element. The coatings also help ensure virtually maintenance-free performance and long service life. Aluminum also provides a high degree of radiant heat reflectivity regardless of whether a roof is a low or steep slope. This ability to deflect the sun's heat-generating rays results in less heat transfer to the interior of the building during the summer which, in turn, lowers energy costs by reducing cooling loads.

Based on the Aluminum for Construction market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
