Abstracts

Small practices don't have the resources to house and locally install an EHR system. Hence the popularity of web-based solutions which dramatically reduce the IT burden for practices. A web-based solution works well in the ambulatory environment. The records are portable, accessible from anywhere (all one needs is an Internet-connected computer). Information moves between staff members more as messages, rather than orders – the “order sheet” that is a standard part of an inpatient chart does not exist in an ambulatory record.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Ambulatory Electronic Health Records market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation. Further, mergers & acquisitions, emerging market trends, the impact of COVID-19, and regional conflicts will all be considered.

In a nutshell, this report is a must-read for industry players, investors, researchers, consultants, business strategists, and all those who have any kind of stake or are planning to foray into the market in any manner.
