Abstracts

Small practices don't have the resources to house and locally install an EHR system. Hence the popularity of web-based solutions which dramatically reduce the IT burden for practices. A web-based solution works well in the ambulatory environment. The records are portable, accessible from anywhere (all one needs is an Internet-connected computer). Information moves between staff members more as messages, rather than orders – the “order sheet” that is a standard part of an inpatient chart does not exist in an ambulatory record.

Based on the Ambulatory Electronic Health Records market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
