## Abstracts

Ampicillin, a semi-synthetic derivative of penicillin, causes cell death by interfering directly with bacterial cell wall synthesis and indirectly by initiating the release of enzymes that further aids in altering the cell wall. Presence of an amino group is the only difference between ampicillin and penicillin. An amino group in ampicillin aids penetration through the outer membrane of gram-positive and certain gram-negative bacteria. Ampicillin finds use as an antibiotic in preventing and treating a number of bacterial infections such as respiratory tract infections, meningitis, salmonella infections, urinary tract infections, and endocarditis. Ampicillin is also used in the treatment of group B streptococcal infection in newborns. Ampicillin was the first 'broad spectrum' type of penicillin having activity against gram-positive bacteria.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Ampicillin market covering all its essential aspects.
