Abstracts

Android POS is a service that allows users to use their mobile terminals (usually mobile phones) to pay for goods or services they consume. The unit or individual sends the payment instruction directly or indirectly to the banking financial institution through the mobile device, the Internet or proximity sensing to generate the money payment and the fund transfer behavior, thereby realizing the mobile payment function. Mobile payment combines terminal equipment, the Internet, application providers, and financial institutions to provide users with financial services such as money payment and payment.

Based on the Android Pos market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
