Abstracts

Anhydrous ammonia, is a colorless liquid with a strong pungent odor. As an important chemical raw material, ammonia is convenient for transportation and storage. Usually, gaseous ammonia is used to obtain anhydrous ammonia by pressurizing or cooling. Anhydrous ammonia is easily soluble in water and dissolves in water to form ammonium ions NH_4^+ and hydroxide ions OH^- . Anhydrous ammonia is stored in pressure-resistant cylinders or steel tanks and cannot coexist with acetaldehyde, acrolein, and boron. Anhydrous ammonia is corrosive and volatile and widely used in industry. Based on the Anhydrous Ammonia market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
