## Abstracts

Antibiotic use in livestock is the use of antibiotics for any purpose in the husbandry of livestock, which includes treatment when ill (therapeutic), treatment of a batch of animals when at least one is diagnosed as ill (metaphylaxis, similar to the way bacterial meningitis is treated in children), and preventative treatment (prophylaxis) against disease. The use of subtherapeutic doses in animal feed and/or water to promote growth and improve feed efficiency was eliminated effective January 1, 2017, as a result of new FDA Veterinary Feed Directive. Antimicrobials (including antibiotics and antifungals) and other drugs can only be used by veterinarians and livestock owners in the U.S. for treatment, control, or prevention of diseases.
