## Abstracts

Pharmaceutical, cosmetics and personal care products are the first line of target for counterfeiters. The fact behind the rigorous counterfeiting activities is the presence of high volume low value manufacturing nature of the market. Presently, the trends in cosmetics and personal care industry are shifting from premium beauty products to routine skin care products that are sold across local market. This would increase the threats from counterfeiting across cosmetics and personal care industry. Furthermore, the decentralization of pharmaceutical industry in terms of manufacturing and emergence of small scale personal care industry reduces the manufacturers control on the supply chain. Thus, increases the probabilities of counterfeiting. However, the advancement in track and trace technologies, increasing practices of multi-layered authentication technologies have bring revolutionary changes in securing original products. Companies with premium range of products are opting for RFID and ePedigree authentication technologies. However, economic product categories are majorly secured with the conventional authentication technologies such as holograms, inks and dyes.
