Abstracts

Application lifecycle management (ALM) is the product lifecycle management (governance, development, and maintenance) of computer programs. It encompasses requirements management, software architecture, computer programming, software testing, software maintenance, change management, continuous integration, project management, and release management

Application Lifecycle Management (Alm) Software is a software tool that uses computer-aided software engineering. An organization usually produces software for multiple customers, and the requirements of customers are diverse. A software life cycle often does not fit all situations, so organizations can specify more and can be modified to suit the organization. When developing a project definition software process, the process management method helps to reduce the artificial development caused by the software development process, especially for the development of large-scale applications.

Based on the Application Lifecycle Management (ALM) Software market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
