Abstracts

Aquaponics is the system of farming plants and fish together in a mutually beneficial series and is intended to be a highly sustainable production system that incorporates principles of water conservation, sustainable vegetable production and perhaps organic plant and animal agriculture. It is the sustainable form of agriculture which integrates conventional aquaculture and hydroponics leading to the growth of fishes and plants together in a symbiotic environment. Waste produced by fish contains lots of beneficial nitrates and ammonia which is not good for fishes if they remaining water in great quantity. These nitrates and ammonia-containing wastes are good fertilizers for plants which can consume all these nutrients to purify the water.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Aquaponics market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation.
