Abstracts

Aquaponics is the system of farming plants and fish together in a mutually beneficial series and is intended to be a highly sustainable production system that incorporates principles of water conservation, sustainable vegetable production and perhaps organic plant and animal agriculture. It is the sustainable form of agriculture which integrates conventional aquaculture and hydroponics leading to the growth of fishes and plants together in a symbiotic environment. Waste produced by fish contains lots of beneficial nitrates and ammonia which is not good for fishes if they remaining water in great quantity. These nitrates and ammonia-containing wastes are good fertilizers for plants which can consume all these nutrients to purify the water.

Based on the Aquaponics market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
