Abstracts

Beyond the large monitors used for in-console navigation, controls and rear-seat DVD systems, the most exciting advances are in head-up display (HUD) systems, a classification extending to any transparent display that presents data without requiring the user to look away from the usual field of view. HUD systems superimpose vehicle information such as speed, warning signals and indicator arrows on the windshield, allowing drivers to maintain their focus on the road while receiving information that would normally require a glance at an instrument panel on the dashboard.
