Abstracts

The term 'architectural fabrics' generally refers to structural fabrics used to form tensile surfaces, such as canopies, roofs and other forms of shelter. Architectural fabrics are generally held in position by tension forces imposed by a structural framework, a cabling system, internal air pressure or a combination. Typically, the membrane is formed by a fabric, consisting of a woven base cloth, coated on both sides with an impermeable polymer, and sometimes a durable topcoat, however a wide range of variations are available, ranging from open weave fabrics, to transparent foils.
