Abstracts

Artificial intelligence extends a computer's normal input and output programming (more than just loading Facebook and YouTube). It allows computers to make predictions and adapt how they respond in certain situations -- just like us, but hopefully not enough to take over the planet. Many traditional bookkeeping tasks are already being performed by AI. Accounts payable and receivable AI handles much of the work of initiating payments and matching purchase orders. Automated data entry and data categorization help accountants more quickly analyze broad financial trends.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Artificial Intelligence in Accounting market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation. Further, mergers & acquisitions, emerging market trends, the impact of COVID-19, and regional conflicts will all be considered.

In a nutshell, this report is a must-read for industry players, investors, researchers, consultants, business strategists, and all those who have any kind of stake or are planning to foray into the market in any manner.
