Artificial intelligence helps machines to behave like humans in areas like face recognition, decision making, learning and solving problems. AI are basically used for learning and taking self-decisions on the processing of complex organized or unorganized data. Internet of things (IoT) is a network of technologies or sensors that contain embedded technology that helps in communicating and interacting with their data that is they receive and transfer data through the network without human interactions or human to computer involvement. These data from devices or sensors can be stored in the cloud and it can be made available for real-time analytics. IoT collects these vast amount of data from different environment. With the help of data science, AI converts these collective data into applications, applying analytics to the data to make decisions. So the whole process involves collecting and processing data which requires new ways of innovating with AI.
