Abstracts

An asynchronous motor, also called an induction motor, is an alternating current motor. The stator coil uses electromagnetic induction to generate current to the rotor, and the motor produces torque, so no permanent magnets are needed. Asynchronous motors can be divided into winding cages and squirrel cages in the form of rotor windings. The winding type is a three-phase motor, and the squirrel cage type has a three-phase motor and a single-phase motor. The rotor of the squirrel cage induction motor can be connected to circuitry external to the motor.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Asynchronous Motor market covering all its essential aspects.
