## Abstracts

An asynchronous motor, also called an induction motor, is an alternating current motor. The stator coil uses electromagnetic induction to generate current to the rotor, and the motor produces torque, so no permanent magnets are needed. Asynchronous motors can be divided into winding cages and squirrel cages in the form of rotor windings. The winding type is a three-phase motor, and the squirrel cage type has a three-phase motor and a single-phase motor. The rotor of the squirrel cage induction motor can be connected to circuitry external to the motor.

Based on the Asynchronous Motor market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
